

Change/trend Management Objectives

these describe objectives in terms of change from current conditions

for example . . .

- Increase the mean density of *Lomatium cookii* by 20% over the next 10 years at the Green Meadow site.
- Decrease the cover of *Bromus tectorum* by 30% at the old gravel pit between 2005 and 2010.

**Change/trend
Management Objectives**

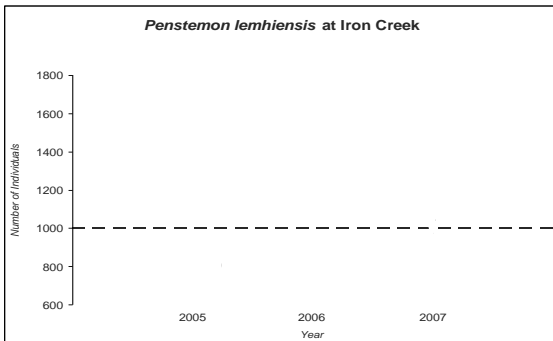

Target/threshold Management Objectives

these describe objectives as
desired future conditions

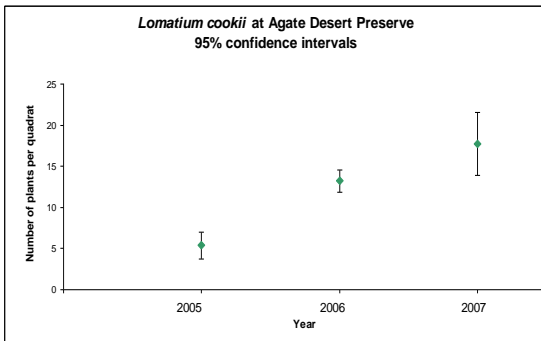

for example . . .

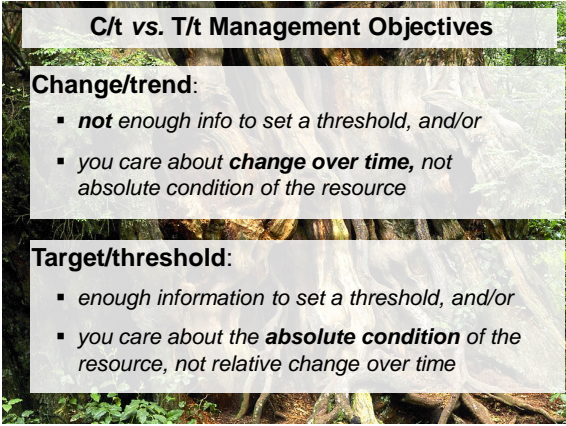

- Increase the population of *S. giganteum* to 2000 adult individuals at Giant Forest during the next millennium.
- Maintain the study site free from *Cirsium vulgare* for 10 years after completion of construction.

Target/threshold Management Objectives

Change/trend Management Objectives

C/t vs. T/t Management Objectives

Change/trend:

- **not** enough info to set a threshold, and/or
- you care about **change over time**, not absolute condition of the resource

Target/threshold:

- enough information to set a threshold, and/or
- you care about the **absolute condition** of the resource, not relative change over time
